

THE CUTTING EDGE

Rise to the Occasion

It's a perennial challenge we face here at Grunau: Building staircases that achieve the architects visual design goals and that can be effectively fabricated within a specified budget.

At Grunau, we are always up for that challenge! This particular staircase, built at the API Headquarters in Minneapolis, Minnesota, stands in grandeur in the main entrance. Built with steel under drywall and sheet glass, these stairs appear weightless due to the invisible support system. The result was nothing less than stunning. In fact, we find ourselves humming a certain Led Zeppelin song just talking about it.

Let Grunau help you take the first step with your next challenge.
