

# THE CUTTING EDGE

## Watch That Last Step. It's A Doozy.

Any paramedic will tell you that a fall from a height of three times a person's height can be fatal. Protecting maintenance employees from accidental falls should be an important part of your company's safety plan.

Grunau Metals was asked by a major Milwaukee-area organization to develop several fall protection solutions that would provide greater access and protection from accidents when maintenance was being performed. In the past, workers would erect temporary and somewhat flimsy wood structures to help them access critical areas. Now, with Grunau's help, access is easier and safer.

Does your safety plan include fall protection solutions? Something to think about in the year ahead...

## Grunau Company goes green

We are excited to announce we have completed the installation of our own solar photovoltaic array located on the roof of the Milwaukee office building. Photovoltaics is another step we have implemented to conserve energy and reduce our carbon footprint.

The experience gained from the project will enable us to provide another service to our customers. Furthermore, the electricity produced will generate positive revenues for years to come. For more details and photos, please [click here](#).
