

FINANCIAL TECHNOLOGY SERVICES COMPANY

PROJECT SNAPSHOT:

Description:

Chiller and pump system installation

Completed:

November 1999

GRUNAU COMPANY ALLOWS BUSINESS TO CONTINUE UNINTERRUPTED

PROJECT OVERVIEW

Grunau Company's service and maintenance team and Grunau Metals worked together to install a temporary chiller and related maintenance catwalk for a financial technology services company.

SITUATION

Grunau Company's service and maintenance team and Grunau Metals were called to help a longstanding client with some rooftop repairs. The company needed to replace one of its nine rooftop chiller and pump units without shutting down its operations. The teams attached a temporary chiller positioned on a trailer to the facility to prevent any downtime and minimize disruptions. At the same time, Grunau Metals designed and constructed a catwalk around two permanent chillers to allow maintenance crews easy and safe rooftop access.

RESULTS

Grunau's innovative thinking allowed the company to continue running its operations without any disruptions, and maintenance crews now can safely access equipment using the catwalks.

FROM THE CLIENT'S PERSPECTIVE:

"Grunau Company really worked around our needs when completing this project," said a company representative. "Grunau's dedication to their clients is evident in the way they conduct business."
